

⚡ JERSEY HACKATHON 2026

FPark

Smart Peer-to-Peer Parking for Jersey

Unlocking private spaces to reduce town congestion, lower emissions, and create an improved parking network across St Helier.

⚠ Problem: St Helier Parking Crisis

97%

Occupied by 11:00 AM

Only 107 of 3,561 public spaces remain free during peak hours.

(December 2019 weekday count)

❌ Commuter Gridlock: 1,200+ cars per 1,000 people creates severe daily bottlenecks around St Helier.

❌ Wasted Time & Emissions: Drivers waste fuel and increase town pollution circling blocks for open spots.

✅ Untapped Opportunity: Private driveways may represent unused daytime parking capacity.

Users: Who Is FPark Built For?

St Helier's Commuters

Issues: Frustration and uncertainty finding town centre parking before work.

Value: Guaranteed, reserved spot waiting upon arrival.

Parking Spot Owners

Issues: Unused space while away at work yielding zero economic value.

Value: Passive micro-income from existing property.

Jersey Community

Issues: Increasing traffic congestion and limited land for concrete car parks.

Value: Cleaner air and better use of existing local spaces.

Shortcomings of Current Software

Legislation

A large number of big companies don't bother even coming to such a small area or updating an area like Jersey

Lack of Users

Issues: If there are few users, there won't be many spaces, and as a result fewer users

Fix: Focus on a Jersey audience to push for maximum participation and achieve network EOS

How FPark Works: Live Prototype

1. Hosts List Their Space

Hosts add a photo, location, price and the times their parking space is available.

2. Drivers Search

Drivers choose a Jersey location and time to compare nearby spaces and availability.

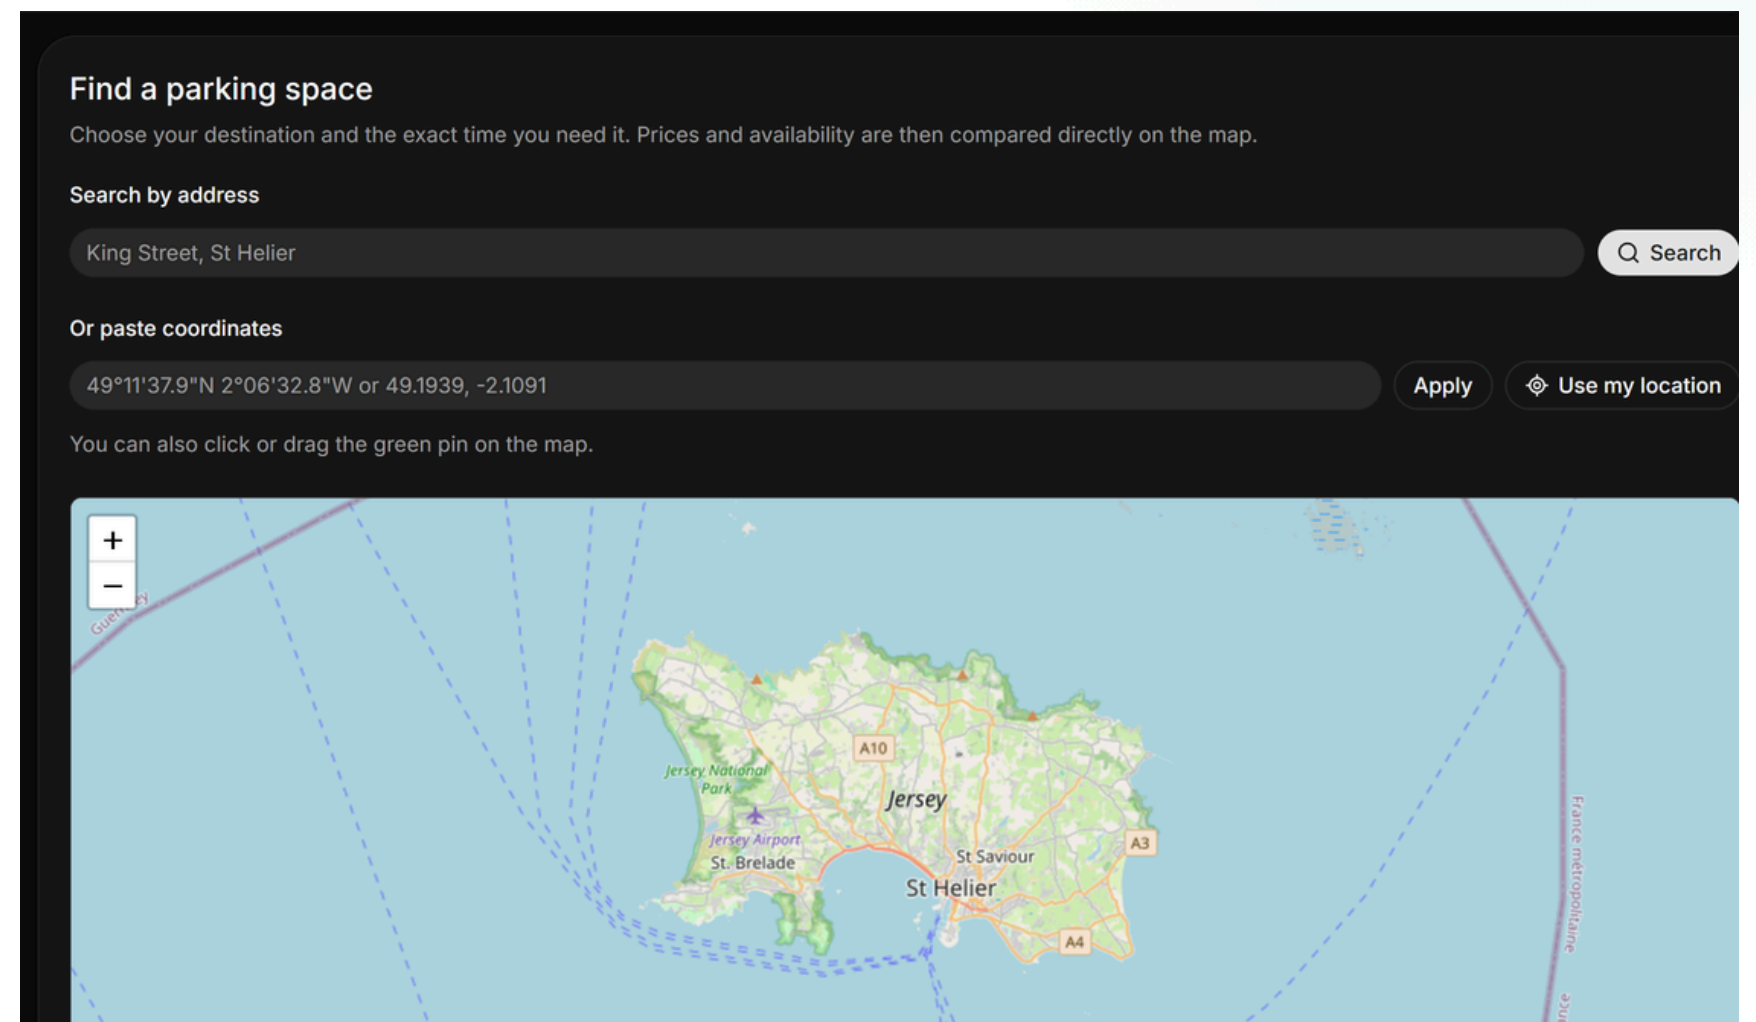

3. Drivers Reserve and Navigate

Drivers reserve an available space, view their booking details and open directions to the location.

Live Prototype Demo

We'll now demonstrate the complete host and driver journey using two separate accounts.

Potential Impact: What Could Get Better?

Unlocks Existing Capacity

Could make suitable private parking spaces available when their owners are not using them—without building a new car park.

Reduces Parking Search

Pre-booked spaces could reduce the time drivers spend searching for parking where private supply matches demand. This would need to be validated through a pilot.

Potential Host Income

Could allow Jersey property owners to earn from available parking hours once payments and payouts are introduced.

Risk & Mitigation Matrix

Potential Risk	The Challenge	Planned Mitigation
 Trust & Security	Homeowners hesitant about stranger's vehicles on driveways	Verified user profiles, digital agreement logs & mutual rating system
 Overstays	Driver lingering past booked timeframe	Automated GPS check-outs, owner alerts & clear overstay penalty rules
 Fair Pricing	Uncontrolled price spikes during busy periods	Transparent capped hourly rates aligned with Jersey public pricing benchmarks
 Accessibility	App complexity discouraging older residents	Simple UI and an easily understood 3-step listing process

How We Built FPark in Two Days

Next.js

ShadCN UI

Built the responsive App Router interface, dashboard, booking forms and reusable UI components.

AI-Assisted Development

Codex and **Antigravity** supported rapid multi-file implementation, debugging, code review and iteration during the hackathon.

Supabase

- ✓ BaaS powered by PostgreSQL and is an open-source Firebase alternative
- ✓ Supports file storage, auth, DB and edge functions

OpenStreetMap

Leaflet maps and Nominatim geocoding power Jersey location selection, address search and nearby-space comparison.

Canva was used for the visual identity and pitch deck.

The Finish Line Pitch

“

“We built a working Jersey-focused prototype that connects drivers with bookable private parking spaces, creating the potential to reduce parking uncertainty and unnecessary searching.”

THE CORE FPARK IMPACT SENTENCE

 **FPARK HACKATHON PITCH**

FPark

Smarter Parking. Cleaner St Helier. Stronger Community.
